

MalaRiaKit (MRK)

Little Children (1-5 years old)

The MRK is a kit to be used in the fight against malaria intended for the community health programs of organizations promoting policies of CSR or sustainable development. Economically affordable, the MRK is designed to diagnose the first symptom of malaria (fever) and provide rapid treatment for the attack. It is an original tool for providing information, education and communication to local populations.

MRK LITTLE CHILDREN

Contents

- 1 forehead thermometer
- 1 box of a complete treatment for symptoms of malaria
- 1 box of a complete treatment for an attack of malaria
- 1 customizable and descriptive jacket

Use of forehead thermometer

Place the strip on the forehead and wait for a few minutes to read the results.

Instructions for treatment of symptoms

1/4 of pill every 6 hours. Do not exceed 6 pills per day: Read drugs instructions carefully before using.

Instructions for treatment of malaria attack

1 pill per day once daily, during 3 days: Read drugs instructions carefully before using.

Available in 4 versions the MRK is tailored to the special needs of populations living in endemic zones and also provides a means of information and education by way of its removable cover, which can carry messages as part of the policy of CSR (Corporate Social Responsibility) or Sustainable Development.
