

Malaria Preventive Kit

Without net

Ed. 2010
HKP004E

This kit is designed to assist in the prevention of risks related to a disease transmissible by insect bite, such as malaria. It is intended for professionals who are required to travel to malarial regions of the world and will easily fit into their luggage.

PREVENTIVE KIT

Contents

- 1 Mosquito repellent with 20% Icaridin, spray 100 mL
- 1 Insecticide for cloth with 4% Permethrin, spray 100 mL
- 1 Plug-in insecticide diffuser + 35 tablets
- 1 Information pamphlet on how to avoid malaria
- 1 Handsome carrying case for products

Use of kit

Icaridin is one of the most effective skin repellents against malaria mosquitoes. It offers 6-8 hours of protection per application.

The insecticidal effect of permethrin lasts for up to 6 weeks, or 6 washings at 40°C maximum. One 100 mL bottle is sufficient to treat 6 m² of cloth or the equivalent of 2 pairs of trousers, 4 shirts and 4 pairs of socks.

All the other instructions for use are specified in the leaflet of the kit.

The first line of defense against malaria consists in avoiding mosquito bites. The World Health Organization (WHO) recommends the joint use of a skin-applied repellent and insecticide-impregnated cloth to provide near 100% protection against bites. This kit contains all that is necessary to protect oneself against mosquito bites, all day long and especially at dusk.
